

Runway alternation programme – 2026 landings

For the communities living beneath the flight paths used by incoming aircraft, runway alternation provides predictable periods of noise relief.

At its heart, runway alternation is straightforward: for part of the day we use one runway for landings and the other for take-offs. Halfway through the day we switch over. If you were living or working under an incoming flight path during the morning, you're unlikely to be under one during the afternoon. And vice versa.

To help our neighbours plan ahead, we produce this annual schedule of runway alternation. Although we do our best to adhere to the programme, it's not always possible. Sometimes delays mean some arrivals can land out of the alternation pattern, or occasionally we have to suspend runway alternation due to bad weather or emergency repairs to one of the runways.

Day-time runway alternation

Day-time runway alternation happens only when we're on what's known as 'westerly operations'. During westerly operations the wind usually blows from the west and aircraft arrive from the east over London. Westerly operations account for about 70% of the year at Heathrow.

At Heathrow, 'day-time' runs from 06:00 until the last aircraft departs at the end of the day. The halfway point – the time when we switch runways – is 15:00.

Day-time runway codes

The day-time schedule uses the runway codes 27R and 27L.

Please note: We use both runways for arrivals between 06:00 and 07:00 as this hour is the busiest time of day for arrivals into Heathrow.

Due to planned runway works, it will be necessary to deviate from this plan, particularly during the night alternation period. Please see www.heathrow.com/runwayresurfacing or our X channel [@HeathrowRunways](https://twitter.com/HeathrowRunways) for updates.

Runway alternation programme – 2026 landings

Night-time runway alternation

Since so few aircraft take off or land at night, there is more scope for runway alternation. Regardless of whether aircraft approach from the east or the west, we can still alternate runways.

This flexibility gives us the ability to operate night-time runway alternation on a four-weekly cycle.

- **Week 1:** Aircraft fly in from the west to land on the northern runway
- **Week 2:** Aircraft fly in from the east to land on the northern runway
- **Week 3:** Aircraft fly in from the west to land on the southern runway
- **Week 4:** Aircraft fly in from the east to land on the southern runway.

Since weather conditions could interfere with this pattern, we always specify a primary and a secondary (alternative) runway in our schedule. The secondary runway is not actually a different runway – it is the primary runway approached from the opposite direction.

Night-time runway codes

The night-time schedule uses the runway codes 09L, 27R, 09R and 27L.

09L = aircraft approaching the northern runway from the west
 27R = aircraft approaching the northern runway from the east
 09R = aircraft approaching the southern runway from the west
 27L = aircraft approaching the southern runway from the east
